

# ZPARK IMD CHARGING

## Product sheet

An add-on service to our Smart Service Base package, enabling individual metering and billing for both EV charging and engine heaters. Energy use is linked to each parking space and billed automatically via the rent invoice or another chosen channel. For administrators, it means less manual work and full oversight and for users, fair and transparent costs based on actual consumption.

### Simple debit via rent notice

Consumption is connected directly to the rental agreement or other selected channel, which simplifies administration and eliminates the need for separate electricity contracts.

### Power measurement per parking space

All electricity consumption for both electric car charging and engine heaters is measured automatically, directly connected to each location.

### Fair and transparent cost distribution

The user only pays for their actual electricity consumption, without an individual electricity network fee.

# Pricing - IMD Charging

<b>Fixed monthly price:</b> 10 SEK per measurement point
<b>For the administrator:</b>
Automatic measurement of electric car charging in each parking space
Automatic reading – no manual handling
Distribution and billing of charging costs directly via rental notice
Consolidated billing in a few larger subscriptions
<b>For the user:</b>
No administration of electricity contracts – the charging cost is charged directly through the rent
Transparent and fair billing of actual charging consumption
Automatic charging reading
No individual electricity grid fee for charging – included in the association's agreement
