

ZPARK IMD PROPERTY

Product sheet

An add-on service to our Smart Service Base package, enabling individual metering and billing for apartments and shared areas. For administrators, it aggregates energy use under a single contract – simplifying management, reducing costs, and enabling collective electricity purchasing. Users benefit from transparent billing based on actual consumption, no individual grid fees, and automatic readings that help lower fixed costs.

All consumption in one place

Each end user's individual energy consumption is measured. The measurement is done automatically without any manual handling required.

Fair and transparent

Billing for consumed electricity does not require administration of an electricity contract. The end user is charged directly through the rent.

Lower fixed costs

Through shared electricity consumption and collective electricity purchasing, costs are reduced and users receive a smoother and more cost-effective solution.

Pricing - IMD Property

Fixed monthly price: 19 SEK per measuring point

For the administrator:

Individual metering and billing of electricity consumption in apartments and common areas

Total consumption in the property's larger subscription

Lower costs through joint subscriptions and collective electricity purchases

Easy administration – no manual handling

For the user:

Transparent and fair billing of actual electricity consumption

Automatic reading of electricity consumption in apartment and parking space

No individual electricity network fee – included in the association's agreement

Lower fixed costs and easy management
